Data Analytics Internship

Task 3

Deep-Dive Analysis & Interactive Dashboarding

Submitted By:

Shridhan Kale

Internship Domain:

Data Analytics

Submission Date:

8/7/2026

Section 2: Introduction

Copy this into your report.

2. Introduction

The objective of Task 3 was to perform an advanced business analysis on the sales dataset and develop an interactive dashboard using Microsoft Power BI.

Unlike the static visualizations created in Task 2, this task focused on defining Key Performance Indicators (KPIs), conducting a deep-dive analysis of business performance, and presenting insights through an interactive dashboard. The dashboard enables users to filter and analyze sales performance dynamically, supporting data-driven business decision-making.

Section 3: Objectives

3. Objectives

- To identify and define key business performance indicators (KPIs).**
- To perform deep-dive analysis of sales data.**
- To build an interactive dashboard using Microsoft Power BI.**

- **To visualize sales performance across products, categories, cities, and customer demographics.**
 - **To enable interactive data exploration using filters and slicers.**
 - **To generate meaningful business insights for decision-making.**
-

Section 4: Dataset Description

4. Dataset Description

The same sales dataset used in Task 1 and Task 2 was utilized for this analysis. The dataset contains customer details, product information, sales transactions, order dates, product categories, and geographical information. The dataset was imported into Microsoft Power BI for visualization and dashboard development.

Dataset Features

Column	Description
Customer_ID	Unique customer identifier
Customer_Name	Customer name
Age	Customer age

Column	Description
Gender	Customer gender
City	Customer city
Product	Purchased product
Category	Product category
Quantity	Quantity purchased
Unit_Price	Price per unit
Total_Sales	Total transaction value
Order_Date	Date of purchase

Stop Here

We'll keep the same workflow as Task 2:

- . Small sections**
- . Easy to copy into Word**
- . No giant blocks of text**

Next Section

We'll write:

Section 5 – Key Performance Indicators (KPIs)

This section will explain:

- **Total Revenue**
- **Total Orders**
- **Total Customers**
- **Average Order Value**

along with their formulas, business importance, and dashboard screenshots. This is one of the most important sections because it directly relates to the interactive dashboard you built.

prepare quick relevant report not to long , so based on this give contents to paste in word file report

I agree. Since this is an internship report, it should be concise, professional, and relevant. We won't make it unnecessarily long. Like Task 2, we'll keep it around 12–15 pages with screenshots.

Below is the exact content you can copy and paste into your Word document.

Task 3 Report

1. Introduction

Task 3 focuses on performing a deep-dive analysis of the sales dataset and developing an interactive dashboard using Microsoft Power BI. The objective is to transform business data into meaningful visual

insights by defining key performance indicators (KPIs), analyzing sales performance, and enabling interactive filtering for better decision-making.

2. Objectives

- Perform deep-dive analysis on the sales dataset.**
 - Define key business performance indicators (KPIs).**
 - Build an interactive dashboard using Microsoft Power BI.**
 - Analyze revenue across products, categories, cities, and customer segments.**
 - Enable interactive data filtering using slicers.**
 - Support data-driven business decisions through visualization.**
-

3. Dataset Description

The analysis uses the same sales dataset from Tasks 1 and 2. The dataset contains customer details, product information, sales transactions, order dates, product categories, and geographical information.

Dataset Attributes

Attribute	Description
Customer_ID	Unique customer identifier
Customer_Name	Customer name
Age	Customer age
Gender	Customer gender
City	Customer city
Product	Purchased product
Category	Product category
Quantity	Quantity purchased
Unit_Price	Price per unit
Total_Sales	Total sales amount
Order_Date	Purchase date

4. Key Performance Indicators (KPIs)

The following KPIs were created to monitor overall business performance.

KPI	Description
Total Revenue	Total sales generated by the business.

KPI	Description
Total Orders	Total number of customer orders.
Total Customers	Number of unique customers.
Average Order Value	Average revenue generated per order.

5. Deep-Dive Analysis

The following analyses were performed using interactive visualizations:

Revenue by Product

Shows revenue generated by each product and identifies the highest-performing products.

(Insert Product Chart Screenshot)

Revenue by Category

Compares total revenue across different product categories.

Revenue by City

Displays city-wise revenue contribution to identify top-performing locations.

Monthly Sales Trend

Analyzes monthly revenue trends to identify sales patterns over time.

Gender Distribution

Shows the distribution of customers based on gender.

6. Interactive Dashboard

An interactive dashboard was developed using Microsoft Power BI to provide a consolidated view of business performance. KPI cards, charts, and slicers allow users to analyze data dynamically based on City, Category, and Gender.

Dashboard Components

- . KPI Cards**
- . Revenue by Product**
- . Revenue by Category**
- . Revenue by City**

- **Monthly Sales Trend**
 - **Gender Distribution**
 - **City Filter**
 - **Category Filter**
 - **Gender Filter**
-

7. Dashboard Insights

- **Electronics generated the highest revenue among all categories.**
 - **Certain products contributed significantly more revenue than others.**
 - **Revenue varied across different cities.**
 - **Monthly sales trends highlighted fluctuations in business performance.**
 - **Customer distribution across genders was nearly balanced.**
 - **Interactive filters enabled focused business analysis for specific customer groups and locations.**
-

8. Business Recommendations

- **Increase marketing efforts for high-revenue products and categories.**
 - **Focus on expanding sales in top-performing cities.**
 - **Improve promotional strategies during lower-sales periods.**
 - **Use dashboard filters to monitor performance for different customer segments.**
 - **Continuously track KPIs for informed business decisions.**
-

9. Conclusion

The interactive Power BI dashboard successfully transformed raw sales data into meaningful business insights. The project demonstrated practical skills in KPI development, business analysis, dashboard design, and interactive data visualization. The dashboard enables users to monitor business performance efficiently and supports data-driven decision-making.

1. KPI Cards

2. Revenue by Product

3. Revenue by Category

4. Revenue by City

5. Monthly Sales Trend

6. Gender Distribution
